LIO Class Catalogue

MNR Region

Class Short Name: MNRREG

Version Number: 3

Class Description:

Land identifying MNR administrative areas that comprise a number of districts for the purpose of managing Ministry programs and resources at a regional level. Extents of the regions were originally compiled by description of: metes and bounds, topographic features, geographic township boundaries, territorial district boundaries, etc. Changes to the regional boundaries have occurred throughout the years.

Abstract Class Name: SPSTNESTED

Abstract Class

Description:

Abstract Spatial Single Tessellating Nested Polygon User Object. Tessellating polygons are logically nested so that the larger, higher level, polygons are made up from smaller lower level polygons. Example: Townships, concessions and lots. A concession comprises a number of lots; a township is made up from a number of concessions. I.e. lots are nested within a concession, which are in turn nested within a township. Other examples include MNR Districts and Regions, and ordered watersheds. Nesting level is indicated by 2 keys: NESTING_LEVEL of the Concrete Class and NUMBER_OF_LEVELS in the layer hierarchy.
